

NO.23 A/C DOES NOT WORK SUFFICIENTLY [SKYACTIV-G 2.0, SKYACTIV-G 2.5]

id0103g3802900

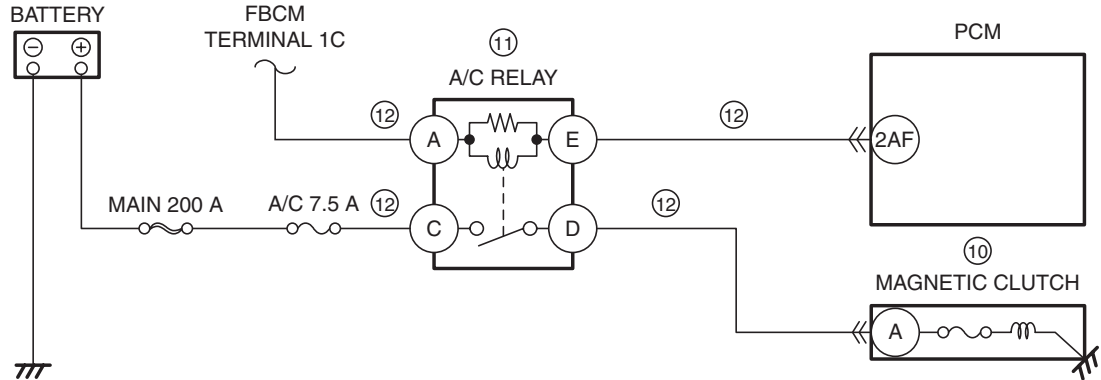

23	A/C DOES NOT WORK SUFFICIENTLY
DESCRIPTION	<ul style="list-style-type: none">• A/C compressor magnetic clutch does not engage when A/C switch is turned on.
POSSIBLE CAUSE	<ul style="list-style-type: none">• PCM, instrument cluster or climate control unit DTC is stored• Refrigerant pressure sensor malfunction• Improper refrigerant charging amount• Seized A/C compressor• Evaporator temperature sensor malfunction• Open or short circuit in wiring harness between the following terminals:<ul style="list-style-type: none">— Evaporator temperature sensor terminal B—Climate control unit terminal H (with manual air conditioner)— Evaporator temperature sensor terminal A—Climate control unit terminal F (with manual air conditioner)— Evaporator temperature sensor terminal B—Climate control unit terminal 1F (with full-auto air conditioner)— Evaporator temperature sensor terminal A—Climate control unit terminal 1X (with full-auto air conditioner)• Instrument cluster malfunction (Does not receive A/C request signal from climate control unit or transmit it to PCM)• Climate control unit malfunction (A/C switch malfunction or climate control unit does not determine A/C request or transmit A/C request signal)• Open circuit in wiring harness between magnetic clutch and body ground• A/C relay stuck open• Open circuit in wiring harness between the following terminals:<ul style="list-style-type: none">— Front body control module (FBCM) terminal 1C—A/C relay terminal A— Battery positive terminal—A/C relay terminal C— A/C relay terminal D—Magnetic clutch terminal A— A/C relay terminal E—PCM terminal 2AF

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	VERIFY PCM, INSTRUMENT CLUSTER AND CLIMATE CONTROL UNIT DTC <ul style="list-style-type: none"> Retrieve the PCM, instrument cluster and climate control unit DTCs using the M-MDS. (See ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) (See DTC INSPECTION [INSTRUMENT CLUSTER].) (See DTC DISPLAY [FULL-AUTO AIR CONDITIONER].) Are any DTCs present? 	Yes	Go to the applicable DTC inspection. (See DTC TABLE [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) (See DTC TABLE [INSTRUMENT CLUSTER].) (See DTC TABLE [FULL-AUTO AIR CONDITIONER].)
		No	Go to the next step.
2	DETERMINE IF MALFUNCTION CAUSE IS A/C RELAY CONTROL SIGNAL OR A/C REQUEST SIGNAL <ul style="list-style-type: none"> Access the PCM PID ACCS using the M-MDS. (See ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) Start the engine and idle it. Turn the ACCS PID to ON from OFF using the M-MDS simulation function. Is the magnetic clutch engaged? 	Yes	Go to the next step.
		No	Go to Step 9.
3	DETERMINE IF MALFUNCTION CAUSE IS REFRIGERANT PRESSURE SENSOR OR OTHER <ul style="list-style-type: none"> Access the PCM PID AC_REQ using the M-MDS. (See ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) Monitor the AC_REQ PID while turning on and off the air conditioner using the switch on the control panel. Is the AC_REQ PID value normal? (See PCM INSPECTION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) 	Yes	Go to the next step.
		No	Go to Step 5.
4	INSPECT REFRIGERANT PRESSURE SENSOR <ul style="list-style-type: none"> Inspect the refrigerant pressure sensor. (See REFRIGERANT PRESSURE SENSOR INSPECTION [MANUAL AIR CONDITIONER].) (See REFRIGERANT PRESSURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) Is there any malfunction? 	Yes	Repair or replace the malfunctioning part according to the inspection results.
		No	Inspect the following: <ul style="list-style-type: none"> Refrigerant charging amount A/C compressor seized Repair or replace the malfunctioning part according to the inspection results if necessary.
5	DETERMINE IF MALFUNCTION CAUSE IS EVAPORATOR TEMPERATURE SENSOR OR OTHER <ul style="list-style-type: none"> Measure the voltage at the climate control unit terminal H (wiring harness-side). (with manual air conditioner) Measure the voltage at the climate control unit terminal 1F (wiring harness-side). (with full-auto air conditioner) Is the voltage normal? (See CLIMATE CONTROL UNIT INSPECTION [MANUAL AIR CONDITIONER].) (See CLIMATE CONTROL UNIT INSPECTION [FULL-AUTO AIR CONDITIONER].) 	Yes	With manual air conditioner: <ul style="list-style-type: none"> Go to Step 7. With full-auto air conditioner: <ul style="list-style-type: none"> Go to Step 9.
		No	Go to the next step.

STEP	INSPECTION	RESULTS	ACTION
6	INSPECT EVAPORATOR TEMPERATURE SENSOR <ul style="list-style-type: none"> Inspect the evaporator temperature sensor. (See EVAPORATOR TEMPERATURE SENSOR INSPECTION [MANUAL AIR CONDITIONER].) (See EVAPORATOR TEMPERATURE SENSOR INSPECTION [FULL-AUTO AIR CONDITIONER].) Is there any malfunction? 	Yes	Replace the evaporator temperature sensor. (See EVAPORATOR TEMPERATURE SENSOR REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].)
		No	Inspect for a short or open circuit between the following terminals: <ul style="list-style-type: none"> Evaporator temperature sensor terminal B—Climate control unit terminal H (with manual air conditioner) Evaporator temperature sensor terminal A—Climate control unit terminal F (with manual air conditioner) Evaporator temperature sensor terminal B—Climate control unit terminal 1F (with full-auto air conditioner) Evaporator temperature sensor terminal A—Climate control unit terminal 1X (with full-auto air conditioner) Repair or replace the suspected wiring harness if necessary.
7	DETERMINE IF MALFUNCTION CAUSE IS INSTRUMENT CLUSTER OR OTHER <ul style="list-style-type: none"> Verify the information display indication of A/C system while turning on and off the air conditioner using the switch on the control panel. Does the information display indicate properly? 	Yes	Instrument cluster does not receive the A/C request signal from climate control unit or transmit it to PCM. <ul style="list-style-type: none"> Replace the instrument cluster. (See INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	DETERMINE IF MALFUNCTION CAUSE IS A/C REQUEST SIGNAL RELATED WIRING HARNESS OR CLIMATE CONTROL UNIT <ul style="list-style-type: none"> Switch the ignition off. Inspect for an open or short circuit between climate control unit terminal B (wiring harness-side) and instrument cluster terminal L (wiring harness-side). Is there any malfunction? 	Yes	Repair or replace the suspected wiring harness.
		No	A/C switch malfunction, or climate control unit cannot determine the A/C request or transmit the A/C request signal. <ul style="list-style-type: none"> Replace the climate control unit. (See CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [MANUAL AIR CONDITIONER].) (See CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [FULL-AUTO AIR CONDITIONER].)
9	DETERMINE IF MALFUNCTION CAUSE IS A/C CONTROL SIGNAL OR MAGNETIC CLUTCH <ul style="list-style-type: none"> Start the engine and idle it. Access the PCM PID ACCS using the M-MDS. (See ON-BOARD DIAGNOSTIC TEST [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) Turn the ACCS PID to ON from OFF using the M-MDS simulation function. Measure the voltage at the magnetic clutch terminal A (wiring harness-side). Is the voltage 10.5 V or more? 	Yes	Go to the next step.
		No	Go to Step 11.
10	INSPECT IF MALFUNCTION CAUSE IS MAGNETIC CLUTCH OR MAGNETIC CLUTCH GROUND CIRCUIT <ul style="list-style-type: none"> Switch the ignition off. Disconnect the magnetic clutch connector. Inspect for continuity between magnetic clutch terminal A (part-side) and body ground. Is there continuity? 	Yes	Inspect the magnetic clutch. (See MAGNETIC CLUTCH INSPECTION [MANUAL AIR CONDITIONER].)
		No	Inspect the A/C compressor. (poor contact to ground) <ul style="list-style-type: none"> If there is any malfunction: <ul style="list-style-type: none"> Repair or replace the malfunctioning part according to the inspection results. If there is no malfunction: <ul style="list-style-type: none"> Replace the A/C compressor. (internal circuit open)

STEP	INSPECTION	RESULTS	ACTION
11	INSPECT A/C RELAY <ul style="list-style-type: none"> • Switch the ignition off. • Remove the A/C relay. • Inspect the A/C relay. (See RELAY INSPECTION.) • Is there any malfunction? 	Yes	Replace the A/C relay.
		No	Go to the next step.
12	INSPECT A/C RELAY CONTROL CIRCUIT FOR OPEN CIRCUIT <ul style="list-style-type: none"> • A/C relay is removed. • Disconnect the PCM connector. • Inspect for continuity between A/C relay terminal E (wiring harness-side) and PCM terminal 2AF (wiring harness-side). • Is there continuity? 	Yes	Inspect for continuity between the following: <ul style="list-style-type: none"> • Front body control module (FBCM) terminal 1C—A/C relay terminal A • Battery positive terminal—A/C relay terminal C • A/C relay terminal D—Magnetic clutch terminal A Repair or replace the wiring harness for a possible open circuit.
		No	Repair or replace the wiring harness for a possible open circuit.
13	Verify the test results. <ul style="list-style-type: none"> • If normal, return to the diagnostic index to service any additional symptoms. (See SYMPTOM DIAGNOSTIC INDEX [SKYACTIV-G 2.0, SKYACTIV-G 2.5].) • If a malfunction remains, inspect the related Service Information and perform the repair or diagnosis. <ul style="list-style-type: none"> — If the vehicle is repaired, troubleshooting is completed. — If the vehicle is not repaired or additional diagnostic information is not available, replace the PCM. (See PCM REMOVAL/INSTALLATION [SKYACTIV-G 2.0, SKYACTIV-G 2.5].)
