

## AIR BAG SYSTEM WARNING ALARM

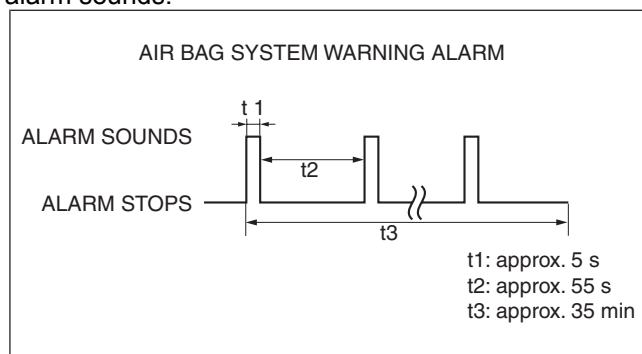

id092200019800

### Purpose

- The air bag system warning alarm notifies the driver of an air bag system malfunction.

### Function

- When the instrument cluster receives the air bag system warning alarm request signal sent from the SAS control module via the CAN signal, the air bag system warning alarm sounds.
- The air bag system warning alarm sound pattern is as shown in the figure.

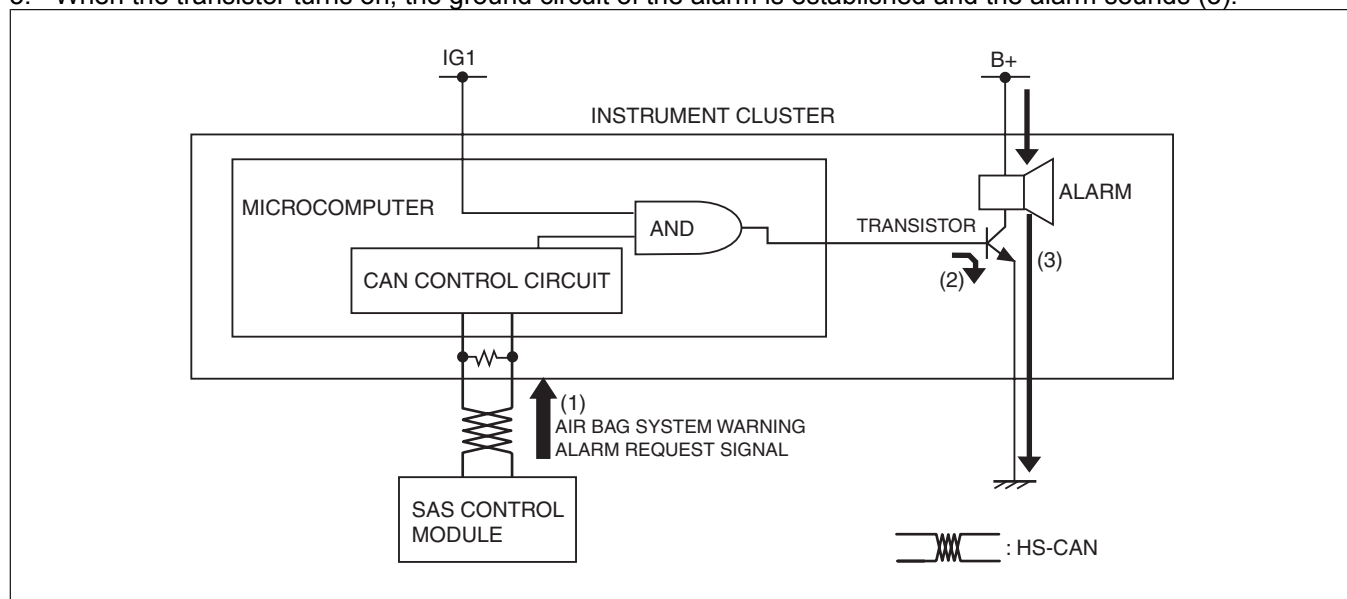

ac5wzn00000618

### Construction

- The air bag system warning alarm sounds using the buzzer built into the instrument cluster.

### Operation

- When the ignition is switched ON (while engine is stopped or running), the instrument cluster receives (1) the air bag system warning alarm request signal from the SAS control module.
- The instrument cluster microcomputer turns the transistor on (2) based on the air bag system warning alarm request signal.
- When the transistor turns on, the ground circuit of the alarm is established and the alarm sounds (3).
